## eclipse git

### 1. GitLab

- new project

#### Create new project

The 'Create new project' section offers three options: 'Create blank project' (for a new workspace), 'Create from template' (for a pre-populated project), and 'Import project' (for migrating data from external sources like GitHub).

You can also create a project from the command line. [Show command](#)

- Create blank project

New project · Create blank project

---

**Project name**

**Project URL**      **Project slug**

Want to house several dependent projects under the same namespace? [Create a group.](#)

**Project description (optional)**

**Visibility Level** ⓘ

**Private**  
Project access must be granted explicitly to each user. If this project is part of a group, access will be granted to members of the group.

**Internal**  
The project can be accessed by any logged in user except external users.

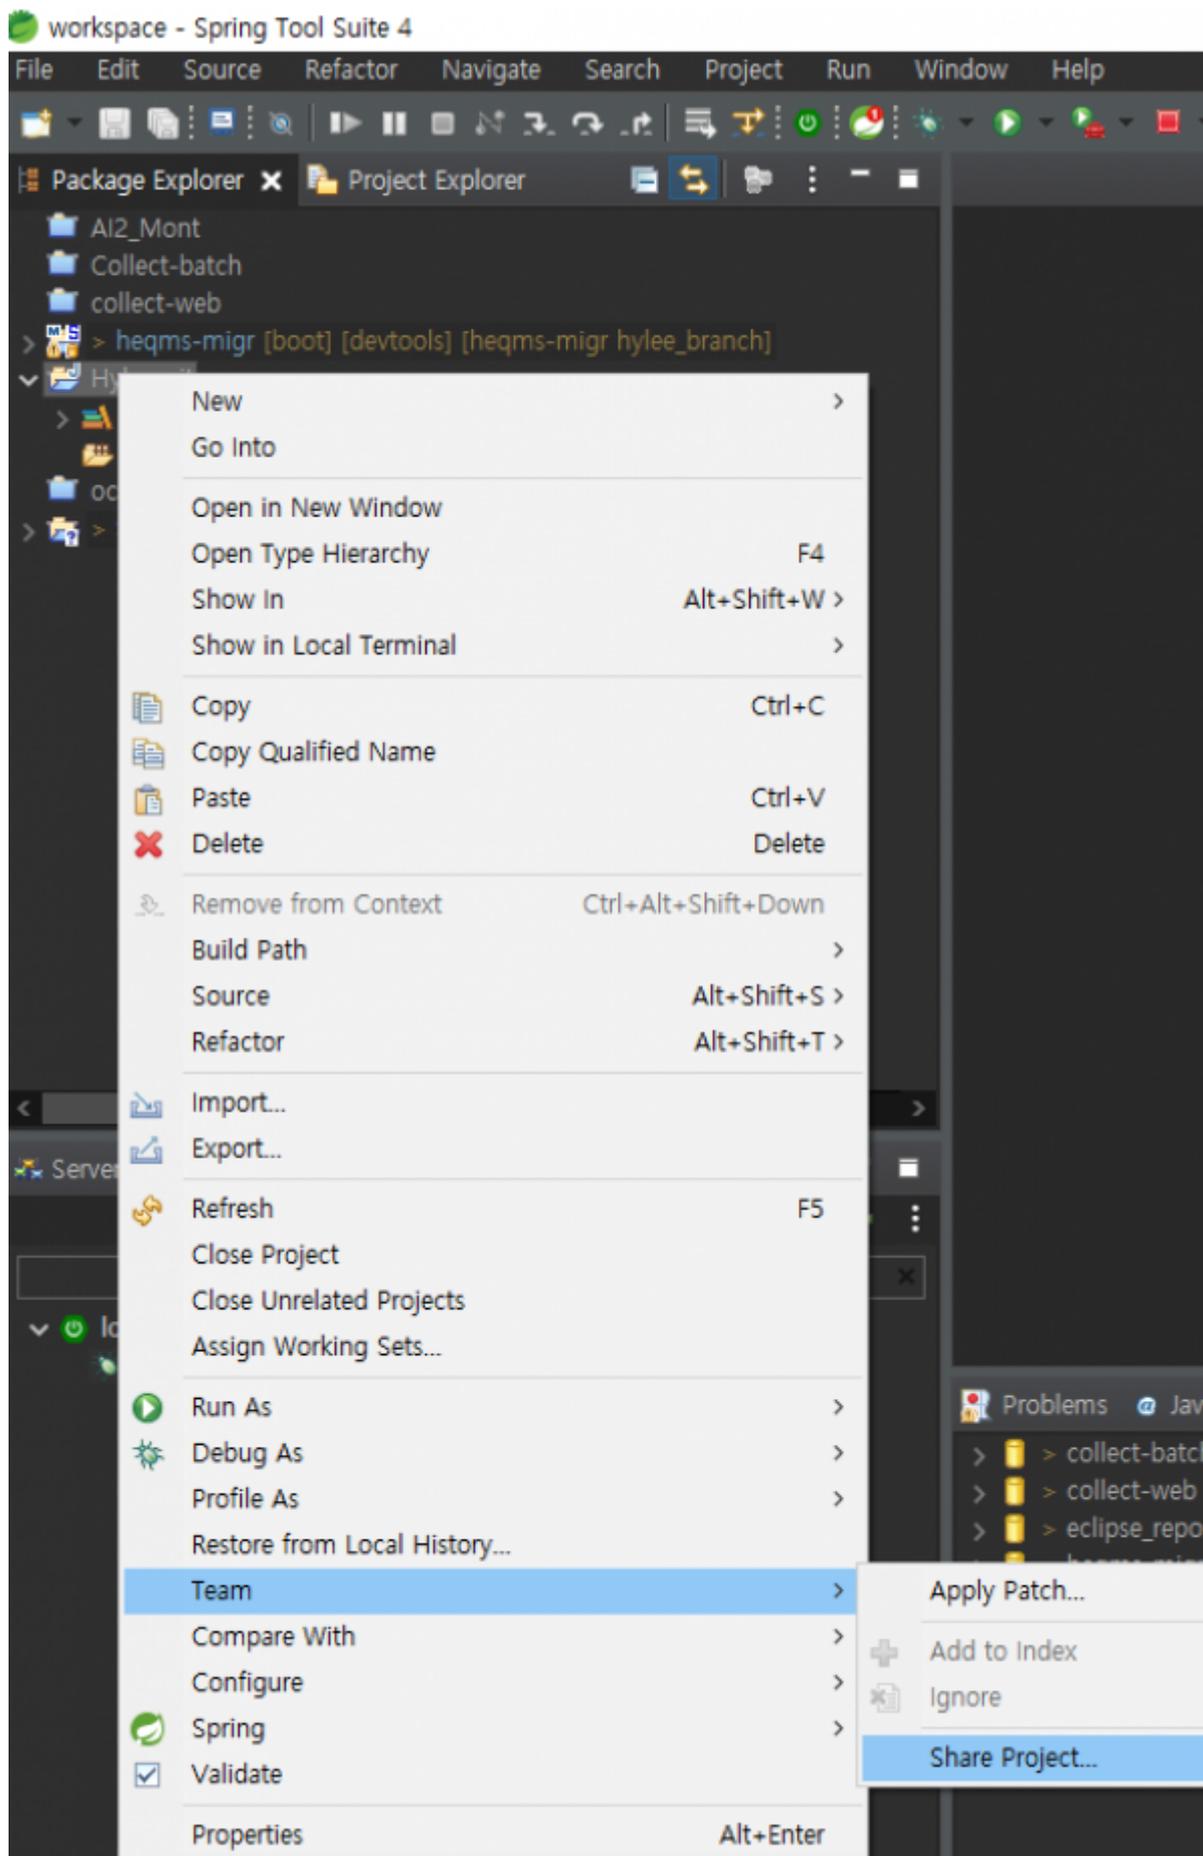

**Public**  
The project can be accessed without any authentication.

**Initialize repository with a README**  
Allows you to immediately clone this project's repository. Skip this if you plan to push up an existing repository.

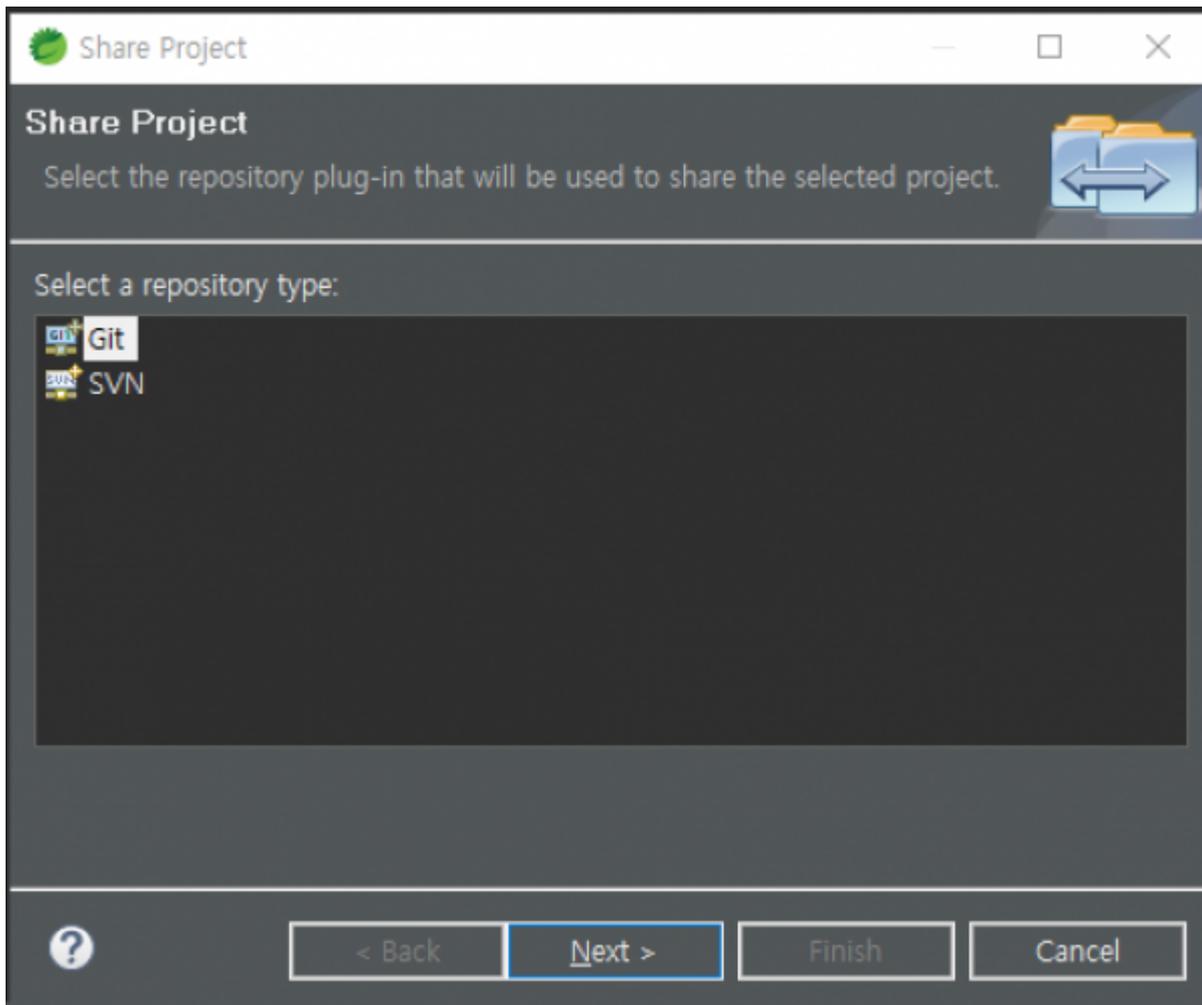

- Project name      Create project

## 2. eclipse      GitLab

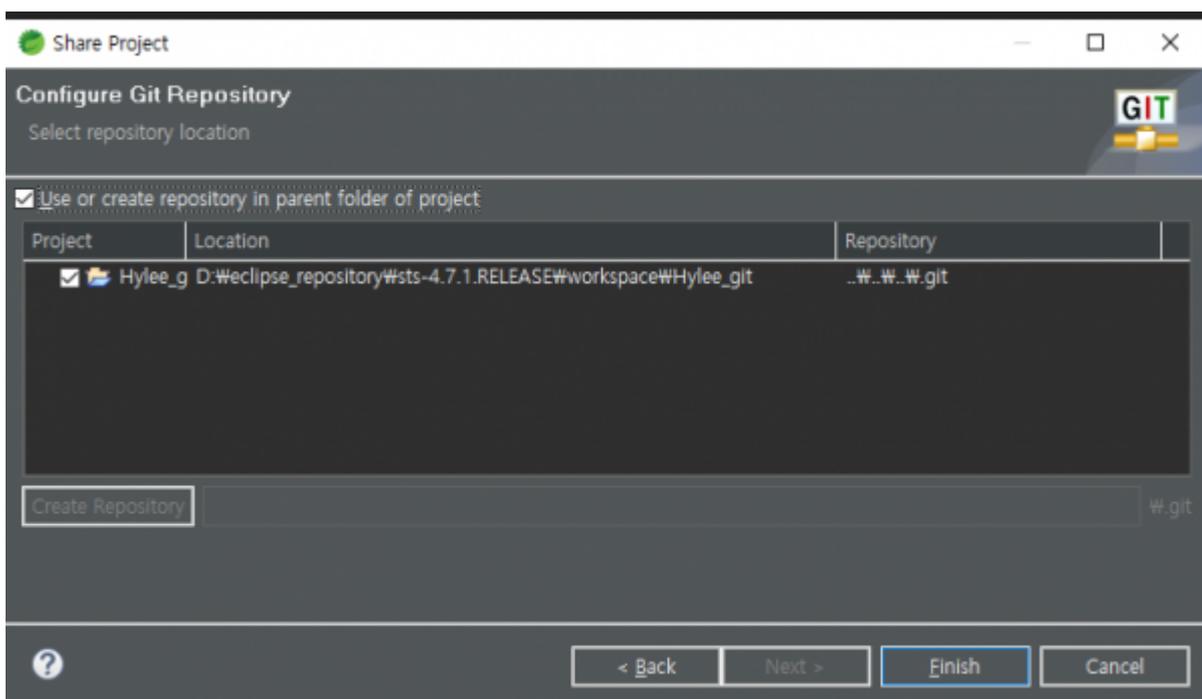

- GitLab

Team > Share Project

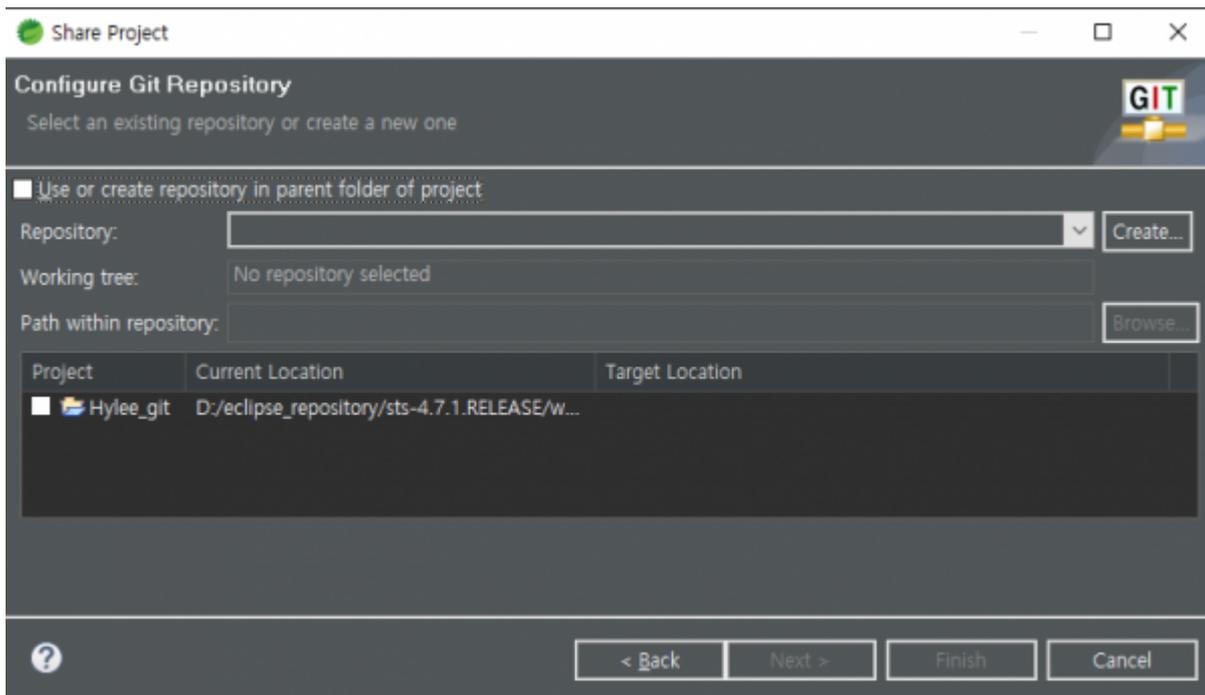

- Git > Next

- Git
- Use or create repository in parent folder of project
