

# Top 30

## Programmer Selection

1) Ctrl + Shift + T for finding a class even from a JAR file

This keyboard shortcut in Eclipse is my most used and favorite shortcut. While working with a high-speed trading system that has a complex code, I often need to find classes with the just blink of the eye, and this Eclipse keyboard shortcut is just made for that. No matter whether you have a class in your application or inside any JAR in the workspace, this shortcut will find it.

2) Ctrl + Shift + R for finding any resource (file) including config xml files

This is similar to the above Eclipse shortcut with the only difference that it can find out not only Java files but any files, including XML, configs, and many others, but this eclipse shortcut only finds files from your workspace and doesn't dig at the JAR level.

3) Ctrl + 1 for quick fix

This is another beautiful Eclipse shortcut that can fix up any error for you in Eclipse. Whether it's missing declaration, missing semi-colon, or any import related error, this eclipse shortcut will help you to quickly sort that out.

4) Ctrl + Shift + o for organize imports

Another Eclipse keyboard shortcut for fixing missing imports. Particularly helpful if you copy some code from other files and what to import all dependencies.

## Quick Navigation

7) Ctrl + o for quick outline going quickly to a method

9) Alt + right and Alt + left for going back and forth while editing.

12) Alt + Shift + W to show a class in the package explorer

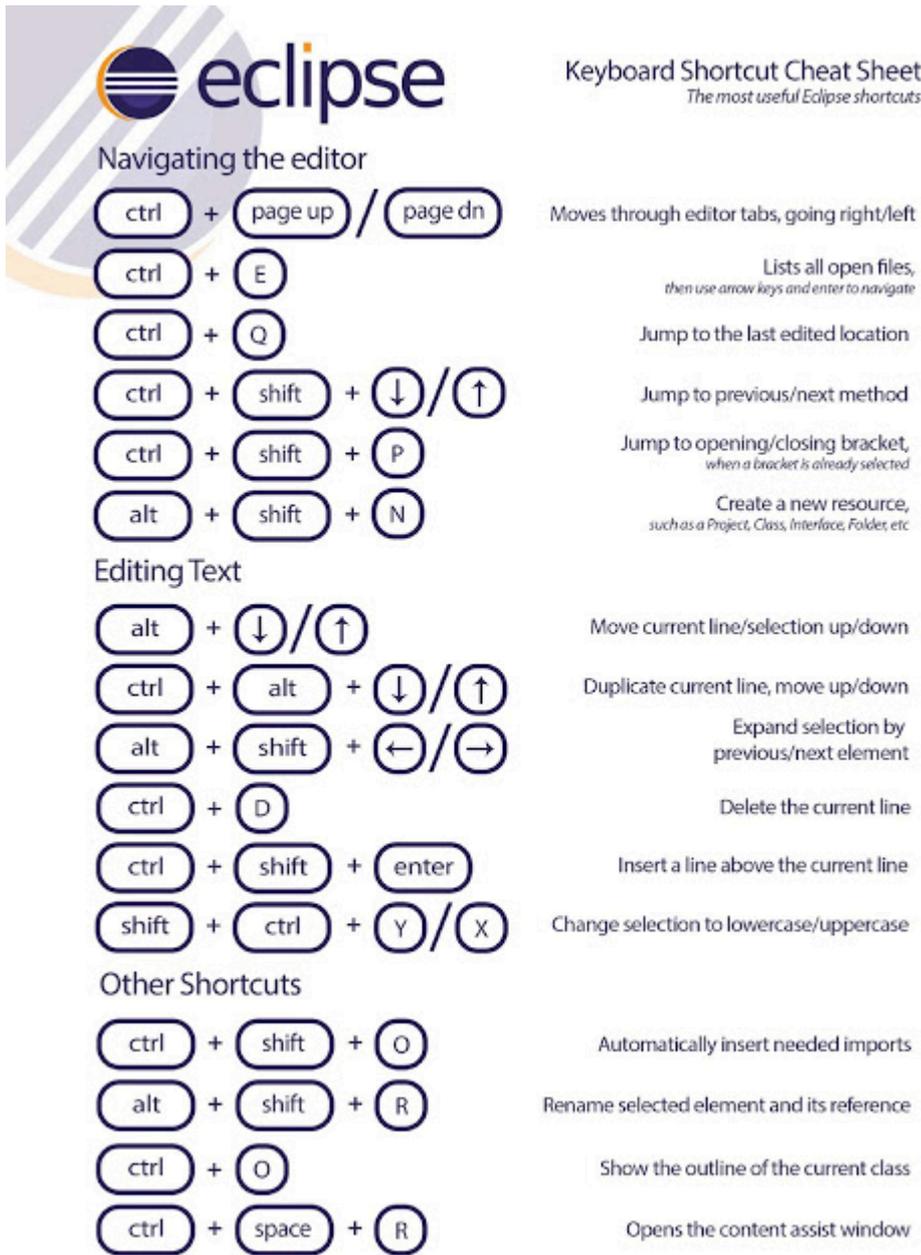

13) Ctrl + Shift + Up and down for navigating from member to member (variables and methods)

15) Ctrl + k and Ctrl + Shift +K for find next/previous

16) Go to a type declaration: F3, This Eclipse shortcut is very useful to see function definition very

# Images

The image is a cheat sheet for Eclipse keyboard shortcuts. It features the Eclipse logo at the top left. The title is 'Keyboard Shortcut Cheat Sheet' with the subtitle 'The most useful Eclipse shortcuts'. The content is organized into three main sections: 'Navigating the editor', 'Editing Text', and 'Other Shortcuts'. Each section lists a keyboard shortcut in a stylized box (e.g., 'ctrl + page up / page dn') followed by a brief description of its function. The shortcuts are presented in a clean, modern font with a light blue and grey color scheme.

**Keyboard Shortcut Cheat Sheet**  
*The most useful Eclipse shortcuts*

**Navigating the editor**

- ctrl + page up / page dn: Moves through editor tabs, going right/left
- ctrl + E: Lists all open files, then use arrow keys and enter to navigate
- ctrl + Q: Jump to the last edited location
- ctrl + shift + ↓ / ↑: Jump to previous/next method
- ctrl + shift + P: Jump to opening/closing bracket, when a bracket is already selected
- alt + shift + N: Create a new resource, such as a Project, Class, Interface, Folder, etc

**Editing Text**

- alt + ↓ / ↑: Move current line/selection up/down
- ctrl + alt + ↓ / ↑: Duplicate current line, move up/down
- alt + shift + ← / →: Expand selection by previous/next element
- ctrl + D: Delete the current line
- ctrl + shift + enter: Insert a line above the current line
- shift + ctrl + Y / X: Change selection to lowercase/uppercase

**Other Shortcuts**

- ctrl + shift + O: Automatically insert needed imports
- alt + shift + R: Rename selected element and its reference
- ctrl + O: Show the outline of the current class
- ctrl + space + R: Opens the content assist window
