```

public void calDateBetweenAandB()
{
    String date1 = "2016-09-21";
    String date2 = "2016-09-10";

    try{ // String Type   Date Type
        //          가
        SimpleDateFormat format = new SimpleDateFormat("yyyy-mm-dd");
        // date1, date2          parse()          Date
        Date FirstDate = format.parse(date1);
        Date SecondDate = format.parse(date2);

        // Date          long type

        //          -950400000. long type          return
        long calDate = FirstDate.getTime() - SecondDate.getTime();

        // Date.getTime()          1970  00:00:00          가

        //          24*60*60*1000(          )          가
        long calDateDays = calDate / ( 24*60*60*1000);

        calDateDays = Math.abs(calDateDays);

        System.out.println("          : "+calDateDays);
    }
    catch(ParseException e)
    {
        //
    }
}

```
