```
/**  
 * Returns an Image object that can then be painted on the screen.  
 * The url argument must specify an absolute {@link URL}. The name  
 * argument is a specifier that is relative to the url argument.  
 * <p>  
 * This method always returns immediately, whether or not the  
 * image exists. When this applet attempts to draw the image on  
 * the screen, the data will be loaded. The graphics primitives  
 * that draw the image will incrementally paint on the screen.  
 *  
 * @param url an absolute URL giving the base location of the image  
 * @param name the location of the image, relative to the url argument  
 * @return the image at the specified URL  
 * @see Image  
 */  
public Class
```
