[Javascript Object Constructors](#)

```
// Constructor function for Person Objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create a Person object
let myFather = new Person("Anthony", "Young", 50, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + "."; // My father is 50.
```

(constructor function)

Object Types (Blueprints) (Classes)

(JS Object Constructors)

“type”

“ ”

“ ”

(object constructor function)

function Person()

new

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create two person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + ". My mother is " + myMother.age + ".";
// My father is 50. My mother is 48.
```

The this Keyword

JavaScript this “ ”

this

, this

this 가 , 가

```
'this'    가    .    .    'this'
```

Adding a Property to an Object

가

Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
}
```

```

    this.age = age;
    this.eyeColor = eye;
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Add nationality to first object
myFather.nationality = "English";

// Display nationality
document.getElementById("demo").innerHTML =
    "My father is " + myFather.nationality; // My father is English

```

myMother가 (person 가) myFather 가 .

Adding a Method to an Object

가 :

Example

```

// Constructor function for Person Objects
function Person(first, last, age, eye) {
    this.firstName = first;
    this.lastName = last;
    this.age = age;
    this.eyeColor = eye;
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Field", 48, "green");

// Add a name method to first object
myFather.name = function () {
    return this.firstName + " " + this.lastName;
};

// Display full Name
document.getElementById("demo").innerHTML =
    "My father is " + myFather.name(); // My father is John Doe

```

Adding a Property to a Constructor

가

가

Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// You can NOT add a new property to a constructor function
Person.nationality = "English";

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
document.getElementById("demo").innerHTML =
  "The nationality of my Father is " + myFather.nationality;
  // The nationality of my Father is undefined
```

가

,

가

.

Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
  this.nationality = "English";
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
```

```
document.getElementById("demo").innerHTML =  
  "My father is " + myFather.nationality + ". My mother is " +  
  myMother.nationality;  
  // My father is English. My mother is English
```

(default values) 가 .

Adding a Method to a Constructor

Example

```
// Constructor function for Person Objects  
function Person(first, last, age, eye) {  
  this.firstName = first;  
  this.lastName = last;  
  this.age = age;  
  this.eyeColor = eye;  
  this.name = function () {  
    return this.firstName + " " + this.lastName  
  };  
};  
  
// Create a Person object  
let myFather = new Person("John", "Doe", 50, "blue");  
  
// Display full name  
document.getElementById("demo").innerHTML =  
"My father is " + myFather.name(); // My father is John Doe
```

가

가

가

Example

```
function Person(firstName, lastName, age, eyeColor) {  
  this.firstName = firstName;  
  this.lastName = lastName;  
  this.age = age;  
  this.eyeColor = eyeColor;  
  this.changeName = function (name) {  
    this.lastName = name;  
  };  
};
```

```
};  
}
```

changeName() person lastName .

Now You Can Try:

JavaScript **this** myMother " " person .

Built-in JavaScript Constructors

JavaScript (built-in constructor)가 .

Example

Did You Know?

String, Number, Boolean, JavaScript (primitive data types)
가 (primitive values) .

:

new Object() {} .

new String() "" .

new Number() 12345 .

new Boolean() true / false .

new Array() [] .

new RegExp() /()/ .

```
new Function()          () {}          .
```
