## The source of this article

[Javascript Object Constructors](#)

```
// Constructor function for Person Objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create a Person object
let myFather = new Person("Anthony", "Young", 50, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + "."; // My father is 50.
```

(constructor function)

## Object Types (Blueprints) (Classes)

(JS Object Constructors)

“type”

“ ”

“ ”

**(object constructor function)**

function Person()

new

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create two person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + ". My mother is " + myMother.age + ".";
// My father is 50. My mother is 48.
```

## The this Keyword

JavaScript    this    “    ”

this

, this

this    가    ,    가

```
'this'    가    .    .    'this'
```

## Adding a Property to an Object

가

### Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
}
```

```

    this.age = age;
    this.eyeColor = eye;
  }

  // Create 2 Person objects
  let myFather = new Person("John", "Doe", 50, "blue");
  let myMother = new Person("Sally", "Rally", 48, "green");

  // Add nationality to first object
  myFather.nationality = "English";

  // Display nationality
  document.getElementById("demo").innerHTML =
    "My father is " + myFather.nationality; // My father is English

```

myMother가 ( person 가 ) myFather 가 .

## Adding a Method to an Object

가 :

### Example

```

// Constructor function for Person Objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Field", 48, "green");

// Add a name method to first object
myFather.name = function () {
  return this.firstName + " " + this.lastName;
};

// Display full Name
document.getElementById("demo").innerHTML =
  "My father is " + myFather.name(); // My father is John Doe

```

# Adding a Property to a Constructor

가

가

## Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// You can NOT add a new property to a constructor function
Person.nationality = "English";

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
document.getElementById("demo").innerHTML =
  "The nationality of my Father is " + myFather.nationality;
  // The nationality of my Father is undefined
```

가

,

가

.

## Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
  this.nationality = "English";
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
```

```
document.getElementById("demo").innerHTML =
  "My father is " + myFather.nationality + ". My mother is " +
  myMother.nationality;
  // My father is English. My mother is English
```

(default values) 가 .

## Adding a Method to a Constructor

### Example

```
// Constructor function for Person Objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
  this.name = function () {
    return this.firstName + " " + this.lastName
  };
};

// Create a Person object
let myFather = new Person("John", "Doe", 50, "blue");

// Display full name
document.getElementById("demo").innerHTML =
  "My father is " + myFather.name(); // My father is John Doe
```

가

가

가

### Example

```
function Person(firstName, lastName, age, eyeColor) {
  this.firstName = firstName;
  this.lastName = lastName;
  this.age = age;
  this.eyeColor = eyeColor;
  this.changeName = function (name) {
    this.lastName = name;
  };
};
```
