JavaScript
                        (objects,
                                           King
                                                                            , JavaScript
JavaScript

    Booleans

                           가
                                              (new
                           가

    Numbers

                                              (new
                         가

    Strings

                                            (new

    Dates

    Maths
    • Regular Expressions(
    Arrays

    Functions

       (primitive values,
                                                     JavaScript
```

JavaScript Primitives

```
(primitive value) 가

(primitive data type)

JavaScript 5가

• string
• number
• boolean
• null
• undefined

( )
```

x = 3.14Χ 3.14

value	Туре	Comment
"Hello"	string	"Hello" is always "Hello"
3.14	number	3.14 is always 3.14
true	boolean	true is always true
false	boolean	false is always false
null	null (object)	null is always null
undefined	undefined	undefined is always undefined

Objects are Variables
