## Sass Partials

Sass partials are files that end in `.scss`. They are used to organize your CSS into smaller, reusable pieces. You can include a partial in another file using the `@import` directive. For example, to include a partial named `_colors.scss` in `main.scss`, you would write:

```
@import "_colors";
```

The partial name is automatically converted to a CSS filename by removing the leading underscore. So `_colors.scss` becomes `colors.css`.

## Sass Partial Syntax

```
_filename;
```

```
( "_colors.scss" partial Sass "colors.css" ):
```

"\_colors.scss":

```
$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;
```

partial `_colors.scss` 가 `colors.css` 가

```
@import "colors";

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
}
```

```
colors: $myBlue;
```
