## Ref

[Sass @import and Partials](#)

## Sass Nested Rules

Sass CSS DRY(Don't Repeat Yourself, )  
 DRY( ) 가 .

CSS reset file, , , , Sass .

## Sass Importing Files

CSS 가 Sass @import (directive) .

@import .

CSS "@import" ; 가 HTTP

Sass "@import" CSS ; 가 HTTP

!

## Sass Import Syntax

```
@import filename;
```

### Tip:

가 . Sass .sass .scss 가

CSS 가 .@import (mixins) , (the main file)

가

```
@import "variables";
@import "colors";
@import "reset";
```

: "reset.scss" reset 가 .

### SCSS Syntax (reset.scss)

```
html,
body,
ul,
ol {
  margin: 0;
  padding: 0;
}
```

"reset.scss" "standard.scss" .  
: @import 가 ;  
, 가 .

### SCSS Syntax (standard.scss):

```
@import "reset";

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}
```

, "standard.css" , CSS .

### CSS output (standard.css)

```
html, body, ul, ol {
```

```

margin: 0;
padding: 0;
}

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}

```

## Sass Partials

Sass partials are files with a .scss extension. They are used to organize your CSS into smaller, reusable pieces. A partial is a Sass file that starts with an underscore. For example, a partial named \_colors.scss would be used to define color variables. To use a partial, you use the @import directive in your main Sass file. For example, to import the \_colors.scss partial, you would write @import "colors"; in your main Sass file. This would allow you to use the color variables defined in the partial. Sass partials are a key feature of Sass that allow you to keep your CSS organized and easy to maintain.

## Sass Partial Syntax

```
_filename;
```

( "\_colors.scss" partial Sass "colors.css" ):

"\_colors.scss":

```

$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;

```

partial , . Sass "\_colors.scss" 가

```

@import "colors";

body {
  font-family: Helvetica, sans-serif;
}

```

```
font-size: 18px;  
colors: $myBlue;
```
