

# SpringBoot

## Jpa(Java API)

1. JPA

### Annotation

- [Spring boot Annotation](#)

### Batch

4. [Spring batch, boot](#)

### Tasklet VS Chunk

	Tasklet	Chunk
When to use		가 . ' .
How it works	가 .	
Usage	.	Step 가 .
Use Case	.	' .

### Troubleshooting

1. Run As Spring Boot App

```
Steps: 1. go to Run->Run configuration -> Maven Build -> New configuration
Steps: 2. set base directory of you project ie.${workspace_loc}/${
}}
Steps: 3. set goal spring-boot:run
Steps: 4. Run project from Run->${ }
```

2. pom.xml Error : Plugin execution not covered by lifecycle configuration

## In Eclipse Luna 4.4.0, you can chose to ignore this error in preferences

Window > Preferences > Maven > Errors/Warnings > Plugin execution not covered by lifecycle configuration. Select Ignore / Warning / Error as you wish. Also, in the quick fix (Ctrl + 1) for this error, it gives an option to mark goal as ignored in Eclipse build in Eclipse preferences (experimental) This is a cleaner way, as it doesn't modify your pom.xml. You will need to do a Maven > Update project to fix the same error in any other project as well.
